Aspire Layer Overview

Aspire Layer Overview

1. **Aspire Layer Overview**

The Aspire Layer provides essential configurations and service defaults that ensure consistent behavior across the application.

2. **Structure and Files**

Overview: This layer handles configuration defaults and service hosting settings.

Files:

- **Actuarial.AppHost.csproj**:

- **Purpose**: Project file for the application hosting configurations.
- **Pros**: Centralizes hosting configurations for the entire application.
- **Cons**: Misconfigurations can lead to system-wide issues.

- **Extensions.cs**:

- **Purpose**: Contains extension methods for service configurations.
- **Pros**: Promotes code reuse and modular configurations.
- **Cons**: Overuse can lead to tight coupling of services.
