Gateway Layer Overview

1. **Gateway Layer Overview**

The Gateway Layer is responsible for routing, security, and API management. It acts as a single entry point for the backend services.

2. **Structure and Files**

Overview: This layer typically includes files for routing configuration, security policies, and service discovery mechanisms.

Files:

- **Core.Gateway.csproj:**
 - **Purpose:** Project file for the Gateway layer.
 - **Pros:** Centralizes gateway configurations.
 - **Cons:** Complex configurations can become difficult to manage.
- **Program.cs:**
 - **Purpose:** Main entry point for the Gateway service.
 - **Pros:** Manages application startup and configuration.
 - **Cons:** Misconfiguration can affect all downstream services.
